

Name: Isaac Abella, Sophomore in Computer Engineer & Computer Science

Background: I grew my interest in STEM and computer science/engineering through robotics at the high school level with FIRST Robotics Competition (FRC). I was a programming for a world's finalist Team and apart of 2 finalist appearances. I have great interest in things such as autonomous systems, AI robotics, and other hobbies such as piano and guitar.

My main interest now still are computer science and robotics as I want to pursue a career in STEM involving robotics. Currently my main focus/interst is the Starship Delivery Robot for Epic Labs, which involves machine learning applications. I want to use my current knowledge in robots and continue to learn more as I implement reinforcement learning to improve robot-human interactions.
